Post-Acute Care Management and Remote Patient Monitoring

Kirby Farrell, CEO, Locus
Lindsey Koshansky, MSN, VP Clinical Innovation, Locus
Rebecca Gwilt, Esq., Partner, Nixon Law Group
Clinical care teams need tools to stay in touch with their patients in a secure and user friendly way. Health care costs are rising and new solutions are needed to care for patients in new ways.

Patients, parents, and caregivers want to be in the comfort of their home. Enabled with a complete solution – they can care for their loved ones, just like they were at the hospital.

Clinicians use secure mobile dashboards equipped with patient summary reports, alerts and trended views to stay informed and avoid emergent events.

A complete solution and platform enables patients to be cared for at home – where patients should be.
Pillars of a successful program

Groups across the health system need collaboration

Clinical Champion(s)

A clinician who is willing to lead the program objectives and support the standard of care being set with remote patient monitoring

Identification of a population by the clinical teams

Executive Support

Executive leadership, including C-level; CIO, CMO, etc.

Support the funding and prioritizing project within the health system

Support use across numerous populations of patients

IT Champion/Support

IT prioritization for implementation of project; support for system integration. Build out of needed tools to support programs.

Data reporting & analytics to show program success.
Locus supplies the iPads equipped with protective coverings, prepaid cellular data plans, JAMF Mobile Device Management software, and an easy-to-read user manual for the families.

iPads are delivered to the hospital once implementation is complete and launch is scheduled. Up to 10% of your inventory can be replaced at no charge if lost, stolen or damaged. Our national average is under 3%.

Your dedicated Account Manager will coach care team members and supply ongoing support in introducing the platform to families at the patient’s bedside prior to discharge from the hospital and assist in transitioning current patients into the program.

Although rare, our friendly 24/7 Help Desk quickly trouble shoots any technical issues arising from either the iPads or monitoring application for both patients and care teams.

Upon completion of the monitoring period, families either return the iPad to the clinician during their next clinic visit or send back directly to Locus using the provided self-addressed stamped box. Our iPad logistics team will digitally wipe and physically clean the iPads to put back into your inventory.
Caregiver – Simplified Data Entry and Alerts
Caregiver – Educational Content and Trended View
Caregiver – Photo Capabilities and Surveys

Today’s Tasks

Measure
What is the appearance of your incision?

Upload an Image Optional

Notes Optional

Helpful Tips & information:
A provider’s note for current measurements and importance as it relates to the patient population, use for future (e.g., measurements, etc.)
